W&T

This device contains software components which are subject to one or more Open Source licenses. Copies of these licenses are found in the Appendix to this document.

The associated source text can be downloaded at

http://www.wut.de/e-5wwww-60-inde-000.php

at no charge. You may also obtain the source text from us for a period of three years after the last shipment in the form of a data medium, also at no charge. Please contact us at

info@wut.de

This offer applies to any recipient of this information.

W&T

Execute PHP-scripts time- and event-triggered and develop quick solutions only with the knowledge of web-technics. Use the integrated web-server with its PHP-support for hosting your own sites.

You can also compile your own binaries from C- and C++-sources for the pure.box and execute them.

Take the pure.box as a carrier for your application.

Access the filesystem via FTP and SMB.

Content

1 Interfaces, Indicators and Installation

Describes the connection and installation options for the pure.box.

1.1 Power

1.2 Network connection

1.3 LEDs

1.4 Button

1.5 Installation

1.1 Power

The pure.box can be powered either via PoE or from an external power supply.

1.1.1 Power via PoE

The pure.box is designed for use in PoE environments according to IEEE802.3af. Power is brought in here over the network infrastructure through the RJ45 terminal. The pure.box supports both phantom power on data pairs 1/2 and 3/6 and power on the unused wire pairs 4/5 and 7/8.

To provide the supplied components with power management, the pure.box identifies itself as a device in Power Class 2 (power consumption from 3.84W to 6.49W).

1.1.2 External power

Alternative to PoE the pure.box can also be powered externally using the plug-in screw terminal on the underside of the housing. The DC voltage must be in a range of

24 ... 48V DC (+/-10%)

When applying the power please note the correct polarity. The 2-pin power plug is correspondingly labeled.

Reversing the polarity will not harm the pure.box.

1.2 Network connection

The pure.box includes an IEEE 802.3 compatible network terminal. The physical connection is made using TP copper cable

1.2.1 10/100BaseT on RJ45

The 10/100BaseT network interface uses a shielded RJ45 connector. The pin configuration and function corresponds to an Auto-MDI(X) interface. Connection to a hub, switch or other network device is made using a maxim 100m long shielded patch cable.

Because the send and receive lines on connected devices are automatically detected, use of any (straight and crossed) network cable is possible.

The network connection is galvanically isolated from the supply voltage for at least 500V.

The pure.box uses **autonegotiation**. To prevent communication problems, caused for example by a duplex mismatch, we recommend operating the port on the switch or hub in this mode as well. Here both the transmission speed and the duplex procedure is automatically negotiated and correspondingly set in the devices.

Managable switches often have special protocols (spanning tree protocol, port trunking, ...) as needed for example for uplinks to other switches or broadband connection of servers. These protocols are not generally needed for connecting normal terminal devices like the pure.box, and they may significantly slow down the opening of a connection after a restart. We recommend disabling these protocols and functions on the port used for the pure.box. Please consult your responsible network administrator.

1.2.2 Power-over-Ethernet (PoE)

The pure.box can obtain its power over the network interface according to IEEE802.3af (Power-over-Ethernet). The data pairs may be used or the wire pairs not used for 10/100BaseT (see section **Power**).

1.3 LEDs

Optical indication of the network status is provided by the pure.box in the form of two LEDs integrated into the RJ45 jack. The device status is displayed by a multi-color indicator also on the front of the unit.

1.3.1 Network status

Two LEDs in the lower corners of the RJ45 jack indicate the current network status of the pure.box. The green LED may assume the following states:

- Off: No link
- On: Link present
- Flashing: Active data communication

The yellow LED indicates the current data rate:

- Off: 10MBit
- On: 100MBit

1.3.2 Multi-color indicator

The multi-color indicator on the front of the pure.box is used to represent the current **system status**:

- Green: **Normal state** of the pure.box. All services are started and the system is fully ready. An underlaid cyclical flashing indicates the system load. The faster this flashes, the greater the process load.
- Blue pulsing: **Booting**. All services are being booted up. At this time no connections to the pure.box can be opened. When bootup is finished the LED changes from red to green. This color change enables visual verification of the three individual colors for function.
- Blue flashing: **Network traffic** to or from the pure.box.
- White pulsing: Ongoing **firmware update**
- Red flashing (approx. 1Hz): **No link**

■ Red, solid on: Serious system error. The system can no longer be properly started.

1.4 Button

The **mechanical button** inegrated into the multi-color display
can be used for manual triggering a **hardware reset**. When the
button is held down the multi-color display changes from green
to yellow to red. This process takes around 5 seconds. Then all
connections are closed and the system is restarted.

After startup is complete the indicator comes on green again,
including the underlaid pulsing which indicates the processor
load.

1.5 Installation

The pure.box enclosure and arrangement of the integrated air vent is designed for installation on a standard DIN rail per DIN EN 50022-35.

When installing, the following **ambient temperatures** must be absolutely maintained in order to prevent damage to the hardware from overheating:

■ Rowed mounting: 0 ... 65°C
■ Non-rowed mounting: 0 ... 70°C

⚠️ *Especially in environments with a high ambient temperature any other mounting configuration must allow for free air circulation.*

2 Navigation and Configuration Concept

If valid IP parameters are set in the pure.box, the complete configuration of the system is made using Web-Based Management (WBM). Any Web browser can be used for access.

2.1 Open configuration access

2.2 Logon, make and save changes

2.3 Navigation

2.1 Open configuration access

Address the pure.box by entering the IP address from any Web browser. this takes you to Web-Based Management.

If you are using HTTPS instead of HTTP for greater security, this must also be specified when opening the page:

```
https://<ip-address>
```

If you have configured your own Web page as the start page which is shown when invoking the IP address, the configuration access is reached as follows:

```
<ip-address>/home
```

or

```
https://<ip-address>/home
```

If the ports used for HTTP and HTTPS differ from the standard values (HTTP: 80, HTTPS: 443), the port number is required as a standard component of the address:

```
http://<ip-address>:<port>
```

or

```
https://<ip-address>:<port>
```

After sending the request the start page for the pure.box will be shown in the browser.

2.2 Logon, changes, saving

Clicking on **Login** in the configuration tree takes you to the Login dialog.

Login

Password	

<p style="text-align:center">Send</p>

Login-Dialog

For access to the configuration, log in with the assigned password. No password is assigned by factory default. After that full access to the system is granted.

⚠ *Changes on pages which are in the pure.box folder in the configuration tree take effect only after logging out. Changes on pages outside this folder take effect immediately.*

Use **Logout** to exit the system. The following options are provided here:

- Save: Any changes made are saved in the non-volatile memory of the pure.box. The services affected by the configuration change are then restarted.
- Restart: The system is restarted and all active connections are closed. No configuration changes are saved.
- Factory defaults: Restores the factory default settings of the pure.box. All user-defined setting are lost.
- Logout: Logs out without changing the configuration.

2.3 Navigation

Navigation is accomplished mainly using the navigation tree on the left side of the page. It is always possible to jump back to higher level pages using the breadcrumb navigation in the upper screen area.

2.3.1 Configuration tree

The configuration tree at left allows you to reach all the changeable options for the pure.box. The individual configuration pages are sorted by topic and stored in a folder structure.

Clicking on the icon for a closed folder expands the corresponding directory. Clicking on the circled minus sign in front of an opened folder closes it again.

If you clock on a closed or opened folder, a table overview of all the options available in this folder appears in the right area of the browser window. The individual entries in the table are also associated with links, which enables jumping to the respective page by selecting the link.

2.3.2 Breadcrumb navigation

Breadcrumb navigation is shown in the upper section of each page. This shows the path of the root directory for the configuration tree, **Home**, up to the currently opened page. Clicking on one of the page titles takes yhou directly to the higher level page.

2.3.3 Navigation without JavaScript

It is recommended that you enable JavaScript for using the pure.box configuration pages. If for security reasons you still prefer not to use JavaScript, you can navigate through the

pure.box configuration using the breadcrumb navigation and
the table overviews on the folder pages.

pure.box

Subitem	Description
Info	Edit device-information

Manufacturer	Modify manufacturer-information
6 Subitem(s)	

Navigation using breadcrumb navigation and table overview

3 Assigning and changing IP parameters

After hardware installation of the pure.box, the IP address needed for operation in a TCP/IP network as well as the subnet mask and gateway address must be entered. Please consult your responsible system administrator for the correct values of these parameters.

The IP address of the pure.box as shipped is 190.107.233.110.

3.1 WuTility

3.2 Managing network parameters

3.3 Automatic address assigning using DHCP

3.4 Static mode

3.1 WuTility

The Windows tool WuTility version 3.70 and higher supports inventorizing and management of the network basic parameters for the pure.box:

- IP address
- Subnet mask
- Gateway address
- Switching between DHCP and Static

To assign these the PC and pure.box must be in the same physical network, whereby the function is independent of the current address setting for the pure.box. This means even if the current IP parameters for the pure.box do not match the PC settings, you can always make a change using WuTility. Any system password set in the pure.box must be known.

The fastest way to install WuTility is using the Install button on the start page, using the product CD included with the pure.box.

Start WuTility then from

Start > Programs > W&T Software Toolkit > WuTility

The current version of WuTility can also be downloaded from our Web site:

`http://www.wut.de`

In addition to assigning parameters using WuTility, you can adjust the network configuration using the WBM in the pure.box as well.

3.2 Managing network parameters

The pure.box distinguishes between two modes with respect to its network-side basic parameters:

- Static
- DHCP

As shipped and after a factory default reset automatic address assignment per DHCP is enabled.

3.2.1 Static

The IP address, subnet mask and gateway are stored in the non-volatile setup of the pure.box and DHCP is enabled. The parameters set in this manner remain intact even after power interruptions and resets, until they are changed using the WuTility inventorizing tool or via WBM.

3.2.2 DHCP

If automatic address assignment using DHCP is enabled, the pure.box attempts to obtain its IP parameters from a DHCP server located in the network. If no DHCP server is in the network or if the attempt to obtain an IP address is rejected. the pure.box operates using the factory default IP address 190.107.233.110. When switching from Static to DHCP mode via WuTility or WBM, this default IP address is defaulted to until valid parameters are assigned.

3.3 Automatic assignment using DHCP

Many network use DHCP (Dynamic Host Configuration Protocol) for centralized and dynamic assignment of the network parameters. As shipped and after a reset to the factory default settings DHCP mode is enabled, so that in network environments with dynamic IP parameter assignment all you need to do is connect the pure.box to the network. The following parameters can be assigned using DHCP:

■ IP address
■ Subnet mask
■ Gateway address
■ Lease time

⚠ *After an unintended parameter assignment or a change via DHCP to an unknown address, the pure.box can be found and identified from its unique MAC address using the WuTility management and inventorizing tool. Changing the incorrect IP address as well as switching to Static mode while DHCP is deactivated can also be done via WuTility.*

3.3.1 Enabling DHCP mode

DHCP protocol is enabled by switching from Static to DHCP mode using WuTility or the WBM on the pure.box. The previous static IP address is deleted when DHCP is enabled. The pure.box defaults to its IP address 190.107.233.110 until new parameters are assigned by a DHCP server.

To set a pure.box to DHCP mode from WuTility, highlight the unit in the device list and click on the **IP-Address** button. In the following dialog window select the radio button **DHCP** and then click on **Next**.

To configure this option using WBM, log in to the browser using the cnfiguration pages in the pure.box and navigate to

Home >> Configuration >> pure.box >> Network

Select the option **Enable DHCP** and then click on the **Apply** button. Use **Logout** and **Save** to save the new setting in the pure.box.

⚠️ *Switching from Static mode to DHCP causes the static set IP address to revert to the factory default setting 190.107.233.110. If the IP assignment using DHCP fails, for example because no DHCP server is available, the pure.box may no longer be accessible, especially in routed network environments. Re-enabling Static mode using WuTility is then only possible from a computer within the same physical network.*

3.3.2 Disabling DHCP mode

DHCP is disabled by switching from **DHCP** mode to **Static** mode using WuTility or WBM in the pure.box. In both cases the new values for IP address, subnet mask and gateway address must be manually set.

To disable DHCP using WuTility, select the corresponding device in the inventory list of the program and click on the **IP-Address** button. In the resulting dialog window select the radio button **Static**. After entering the new IP address, subnet mask and gateway address, click on **Next**.

*In WBM and while logged in navigate to the configuration page for network setting, unselect **Enable DHCP** and enter valid values for IP address, subnet mask and gateway address. After* clicking on **Apply** you can save the values by clicking on **Logout** and **Save**.

3.3.3 System name

To support any possible automated updating of the DNS system by the DHCP server, the pure.box identifies itself within the DHCP protocol with its system name. The factory setting for this name is pure followed by the last three places in the Ethernet address. For example the factory set system name of a

pure.box having Ethernet address 00:c0:3d:01:02:03 is pure010203. The system name of the pure.box can be changed using WBM.

3.3.4 Lease-Time

The lease time determined and transmitted by the DHCP server specifies the term of the assigned IP address. After half the lease time has expired the pure.box attempts to extend the term with the assigning DHCP server or to update the address. If this is not possible by the time the lease time has expired, for example because the DHCP server is no longer available, the pure.box deletes its IP address and reverts to the factory set default IP address 190.107.233.110. At the same time the cylical search for alternate DHCP servers is started in order to assign a new IP address.

After a reset of the pure.box both the assigned IP parameters as well as the lease time associated with the IP address are deleted. The pure.box starts up after a reboot with the default IP address and immediately begins DHCP requests.

In DHCP mode the remaining lease time together with the current IP address are displayed on the Web page

Home >> Properties.

⚠ *If after expiration of the assigned lease time the DHCP server can no longer be reached, the pure.box deletes the current IP parameters, reverts to its factory default IP address and starts the cyclical search for alternate DHCP servers. All open connections are thereby closed. To prevent this problem we recommend configuring the lease time assigned in the DHCP server to infinite if possible.*

3.3.5 Reserved IP addresses

The pure.box is designed as a TCP server and provides services which can be automatically made use of on the computer side.

To open a connection these need of course the IP address of the pure.box, so that it makes sense to reserver a particular IP address for the pure.box on the DHCP server. This is generally done by linking the IP address to be assigned to the unique Ethernet address, which can be found on the housing sticker.

3.3.6 Dynamic IP addresses

Fully dynamic address assignment, whereby the pure.box gets a different IP address after every restart or after the lease time expires, is only practical in network environments with automated cross-linking between the DHCP and DNS services. This means that when a new IP address is assigned to the pure.box, the DHCP server then also automatically updates the DNS system. The new address is thereby associated with the respective domain name. For detailed information about your network environment, consult with your system administrator.

3.4 Static mode

In **Static** mode the pure.box uses **static network parameters**, and automatic address assignment via **DHCP is disabled**. To assign the static values for IP address, subnet mask and gateway address there are two options.

3.4.1 Assigning static parameters using WuTility

Be sure that both the pure.box and the computer you are using are connected to the same physical network. At startup **WuTility** automatically searches the local network for connected W&T network devices and generates an inventory list. This search process can be performed as often as desired by clicking on the **Scan** button:

From the inventory list you can identify the desired pure.box based on its MAC address. When first installing, the default address (190.107.233.110) is set.

pure.box scanned in WuTility

Select the desired pure.box and click on the **IP Address** button:

In the resulting dialog window select the radio button Static and enter the desired values for IP address, subnet mask and gateway address.

IP parameter assignment using WuTility

 Every IP address must be unique within the network.

After clicking on the **Next** button you are prompted for the system password. Then the entered parameters are saved in the pure.box non-volatile memory.

All other settings are made using the Web Based Management of the pure.box and an Internet browser. Select the desired pure.box in the WuTility inventory list and click on the **Browser** button:

 Changing network parameters is protected by the system password. To prevent misuse, we recommend assigning a system password for active pure.boxes.

3.4.2 Assigning static IP parameters using WBM

As shipped and after a reset to the factory default settings, the pure.box is in DHCP mode. As long as no DHCP server assigns an address, the pure.box can also be reached at its default IP address 190.107.233.110. Switching to Static mode and assigning the new IP parameters can also be done from an Internet browser using WBM.

⚠️ *In contrast to address assignment using WuTility, initial startup of multiple pure.boxes using the method described below can only be done one after the other. Only after one pure.box has received its new IP address can the next device be connected to the network.*

⚠️ *Always clarify all changes to the network settings on your computer ahead of time with your network administrator.*

On the computer side the following conditions must be met:

- The IP address of the computer used is in the subnet 190.107.0.0 or is temporarily changed to an appropriate value. To change the IP address of the computer you need Administrator rights. Always clarify such a change in advance with your network administrator.
- On the computer used a fixed route is set which redirects the IP address 190.107.233.110 to the local network. To set up such a route you need Administrator rights on the system. The command line for creating a fixed route under Windows XP is:

```
route ADD 190.107.233.110 MASK 255.255.255.255 <IP-Address of the PCs>
```

Then start your Internet browser and in the address line enter the target **http://190.107.233.110**. Log in to the pure.box using Administrator rights and on the configuration page

   Home >> Configuration >> pure.box >> Network

change the network settings to the new values.

4 Configuring System Parameters

In the following section the configuration of system parameters is described. Access to these configuration options is through the Web Based Management (WBM) on the unit after you have logged in.

4.1 Edit device information

4.2 Select standard language

4.3 Set internal clock

4.4 Manage users

4.5 Modify network parameters

4.6 Change manufacturer data

4.1 Edit device information

From the menu tree of the pure.box navigate to

Home >> Config >> pure.box >> Info

and edit the following values:

- System name
- Description
- Device location
- Service contact

Info

System name	pure<wut1>	Systemname, relevant for DHCP and DNS
Description	Hutschienenwebserver inkl. Binarieausführung	Use-oriented function of the device
Device location		Location of installation
Service contact		Can be called in case of errors and problems

Configuration will take effect at logout

Send	Reload	Logout

Editing system name and information texts

The **system name** directly affects the DHCP and DNS behavior. It can be used for example if these systems are approriately configured to address the pure.box in the browser.

The items Description, Device location and Service contact are only explanatory and are intended to help clarify the pure.box in the application, make the installation location transparent, and indicate whom to contact when service is needed.

Apply your changes before leaving the page by clicking on the **Send** button. The **Reload** button fills in any changed fields with their original values. **Logout** takes you to the Logout dialog.

⚠️ *The configuration changes copied to the buffer memory using the **Send** button only take effect when at the end of a configuration process you have stored them in the non-volatile setup of the pure.box by clicking on **Save** in the logout dialog. After any required restart of the pure.box all changes will be active.*

4.2 Select standard language

On the configuration page Language, which is reached from the menu tree at

Home >> Config >> pure.box >> Language

you can select the standard language for the pure.box. All Web pages are displayed in this language when opened by the pure.box.

Available language profiles:

- German
- English

Language

Default-Language	○ ▬ ○ ▦	Defines the default-language.
	Configuration will take effect at logout	

Send	Reload	Logout

Configuring the standard language

Select the desired language by clicking on the corresponding flag and apply your change by clicking on the **Send** button to the buffer memory.

⚠ *The configuration changes copied to the buffer memory using the **Send** button only take effect when at the end of a configuration process you have stored them in the non-volatile setup of the pure.box by clicking on **Save** in the logout dialog. After any required restart of the pure.box all changes will be active.*

In addition to the fixed language selection using the method described above, you can also change the language profile so that it takes effect immediately. This is done by clicking on the

flag symbols located below the menu tree. The grayed out flag shows here the currently active language profile. You can always switch to the language profile whose flag is not grayed out.

Quick selecting the system language

This method of selecting the language is however only valid for the current session. If the browser is closed or outside pages opened, this setting is lost. The next time the original page is opened the device reverts to the configured standard language.

4.3 Setting the device clock

Internal clock settings are made on the Configuration page

Home >> Config >> pure.box >> Device Clock

Device Clock

Time-Server Client	☑	Activates the time-synchronisation with a time-server
Time-Server 1	pool.ntp.org	A time-server's IP-address or hostname
Time-Server 2	europe.pool.ntp.org	IP-address or hostname of an alternative time-server

Set date/time	☐	Applies Date and Time (available when Time-Server Client is switched off)
Date	26 . 11 . 2010	Formatted date: MM.DD.YYYY
Time	08 : 09 : 30	Formatted time: hh:mm:ss
Timezone	Berlin	Current timezone

Configuration will take effect at logout

[Send]   [Reload]   [Logout]

Device clock settings

When you activate the option **Time-Server Client** the pure.box automatically retrieves the current date and time using Network Time Protocol (NTP). The time servers entered for **Time-Server 1** and **Time-Server 2** are contacted.

Time-Server 1 and **Time-Server 2** are contacted at the same time during a synchronization cycle. The name resolution of the host names entered there, should you be using a public time server, normally returns multiple IP addresses. The more addresses are available to the process here, the faster the time will be calibrated.

The current status of the synchronization procedure can be seen on the Home page under the time and date information displayed there. The following status conditions are possible:

- Time synchronization disabled
- Deviceclock not synchronized!
- Synchronising...
- Deviceclock synchronized

Home

08:01:22

Fri, 26. November 2010
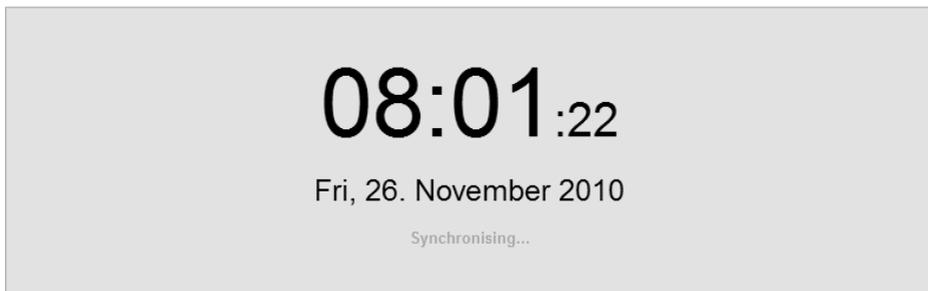

Synchronising...

Time and status information for the time server client on the homepage

After starting synchronization, second-accurate time information will be available after just a very short delay. The target accuracy of the time synchronization is in the microsecond range. To reach this accuracy, the process takes up to half an hour. The **Synchronising…** status displayed on **Home** is replaced by **Deviceclock synchronized** after full synchronization has been completed. If an error occurs during the procedure, the system is set to **System time not synchronized!**. There are then cyclical attempts to synchronize the time and date.

Once the next synchronization takes place automatially depending on the discrepancy with the internal clock.

When **Time-Server Client** is disabled, you can enable the option **Set date/time**. If this is active, transmitting the values with **Send** passes the time information set under **Date** and **Time** to the **Devicec Clock**. Regardless of whether using

automatic or manual time setting, specify for **Timezone** the current location of the pure.box. This selection control the offset to UTC as well as automatic adjustment of the time when changing from daylight savings to standard time and vice-versa.

Apply your changes on this configuration page by sending them to the buffer memory of the device: Click **Send**.

⚠️ *The configuration changes copied to the buffer memory only take effect when at the end of a configuration process you have stored them in the non-volatile setup of the pure.box by clicking on **Save** in the logout dialog. After any required restart of the pure.box all changes will be active*

The internal clock of the pure.box is battery buffered. This means the set time information is not lost when disconnecting the unit from power.

The battery used is a button cell with 3V and 125mAh. Due to the permissible ambient temperature of the pure.box, please use only types designed for an extended temperature range (-30 ... 80°C) when replacing the battery. The standard name for the battery is: BR1632.

Please always properly dispose of used batteries.

4.4 Manage users

Change the password for the administrator on

Home >> Config >> pure.box >> Password

Check the option **Change password** and enter the new one.
You have to repeat the password.

Change password

Change password	☐	Check here for modifying the password
Password		
Re-enter		

Configuration will take effect at logout

Send	Reload	Logout

Changing the administrator account

⚠️ *The configuration changes copied to the buffer memory only take effect when at the end of a configuration process you have stored them in the non-volatile setup of the pure.box by clicking on **Save** in the logout dialog. After any required restart of the pure.box all changes will be active.*

4.5 Modify network parameters

Change the network configuration for the pure.box under

Home >> Config >> pure.box >> Network

To use automatic address assignment using DHCP, select the option **Enable DHCP**. Otherwise you can manually configure the parameters **IP address, subnet mask** and **gateway** in the text field provided. The two possible DNS servers are always entered manually. Even when DHCP is enabled these are not sent s part of the automatic address assignment. All specified IP addresses must use the format xxx.xxx.xxx.xxx.

As shipped the FTP-Server in the pure.box is disabled. By selecting the option **Enable FTP-Server** you can access the user area with any FTP client through TCP port 21. Log in using the user name **admin** and the currently assigned password. The FTP-Client used must instruct the FTP-Server in the pure.box to run in passive mode.

The pure.box also offers access to the internally stored user files using SMB protocol. If you want this memory to be accessible in an MS Windows environment for example, select **Enable SMB-Server**. The system will then be displayed in the network environment, below the specified **Workgroup**, with the **System name**. To access this resource username (admin) and the currently configured password are required. The standard enabled login procedure can be disabled by deselecting **Login required**. In this case neither the user name nor a password are prompted when accessing the subfolder **userfiles**. Direct access to the file system is possible using:

```
\\<IP-Address>[\userfiles]
```

Network Config

Enable DHCP	☐	Activates automatic IP-settings via DHCP
IP-Address	10.40.27.99	Scheme: xxx.xxx.xxx.xxx
Subnet Mask	255.255.0.0	Scheme: xxx.xxx.xxx.xxx
Gateway	10.40.250.252	Scheme: xxx.xxx.xxx.xxx
DNS-Server 1	10.40.250.252	Scheme: xxx.xxx.xxx.xxx
DNS-Server 2	0.0.0.0	Scheme: xxx.xxx.xxx.xxx
Enable FTP-Server	☐	Allows the uploading of userfiles
Enable SMB-Server	☐	Enables the access to userfiels on the device
Workgroup	WORKGROUP	Workgroup in which the device is displayed
Authentification required	☑	
HTTP-Protocol	⊙ HTTP ○ HTTPS	Higher security when using HTTPS
HTTP-Port	80	
HTTPS-Port	443	
Reset-Port	☑	Allow reset by opening TCP-port 8888?

Configuration will take effect at logout

[Send]   [Reload]   [Logout]

Configuring the pure.box network parameters

In the factory default settings all Web pages opened by the pure.box are sent via HTTP. To increase security of the transmission and protect any sensitive data, the connection

can also be encoded by using HTTPS. This change is made in the **HTTP-Protocol** area. The server port can be specified for both protocols independently of each other (**HTTP-Port** and **HTTPS-Port**). As shipped the generally standard values are entered (HTTP: 80, HTTPS: 443).

If the option **Reset-Port** is enabled, the pure.box carries out a warm start after opening **TCP port 8888**. If an Administrator password has been assigned, this must be sent to the system directly after opening the port.

*The configuration changes copied to the buffer memory only take effect when at the end of a configuration process you have stored them in the non-volatile setup of the pure.box by clicking on **Save** in the logout dialog. After any required restart of the pure.box all changes will be active.*

4.6 Change manufacturer data

At

Home >> Config >> pure.box >> Manufacturer

you can change the data for manufacturer and product name or select an alternate logo. These options are especially interesting for systems integrators using the pure.box as part of a larger system..

Manufacturer

Name	Wiesemann & Theis GmbH	Manufacturer information, which are displayed on the "Properties"-page.
Address	Porschestr. 12 42279 Wuppertal Germany	
Phone-No.	+49 (0)202 / 2680-0	
Website	http://www.wut.de	
Product-name	pure.box	
Logo	○ No logo ⦿ Wiesemann & Theis logo W&T www.WuT.de pure.box ○ Upoad logo-file (max.100KB) [ ] Durchsuchen...	Logo displayed above the navigation.

Configuration will take effect at logout

[Send]   [Reload]   [Logout]

Modifying manufacturer data and logo

Under **Name**, **Address**, **Phone-No.**, **Website** and **Product-name** enter the information you want to be shown on the **Properties** page for viewing by all users.

If the protocol type is specified under **Website** (e.g. http:// or https://), addressing is absolute. In this case you can specify the Website which are on different Web servers. Omitting the protocol specification means addressing is relative to the root directory of the pure.box. Relative addressing is recommended for specifying sites which are on the pure.box itself.

Under the **Logo** optoin you can select the company or product logo that you want to appear in the header of the configuration tree. Here you can select from:

- No logo: No graphical company or product logo is shown in the configuration tree.
- Wiesemann & Theis logo: The company logo of the manufacturer of the pure.box is displayed (factory default setting)
- User-defined logo: Any graphics file with a maximum size of 100kB can be loaded into the pure.box and displayed above the configuration tree.

*The configuration changes copied to the buffer memory only take effect when at the end of a configuration process you have stored them in the non-volatile setup of the pure.box by clicking on **Save** in the logout dialog. After any required restart of the pure.box all changes will be active.*

5 My Documents

Setting up a user-defined start page and handling the user files in the directory „userfiles", „programs" and „websites".

5.1 Accessible folders

5.2 Define individual start page

5.3 Time- and event-triggered file running

5.4 Open uploaded Web sites

5.1 Accessible folders

The **userfiles** folder on the pure.box can be accessed via FTP or network sharing. This folder or any subfolder can be used to store any files.

By default there are two subfolders contained in **userfiles** :

■ websites
■ programs

The websites folder is linked to the Web server.

```
<protocol>://<ip-address>/websites/
```

The second subfolder, **programs**, is intended as a save location for PHP scripts, shell scripts and self compiled binaries, which can be run at startup, time- or event-triggered. Irrespective of this folder however all scripts and programs contained in **userfiles** can also be run according to the above criteria.

The complete approx. 750MB capacity is available for user files.
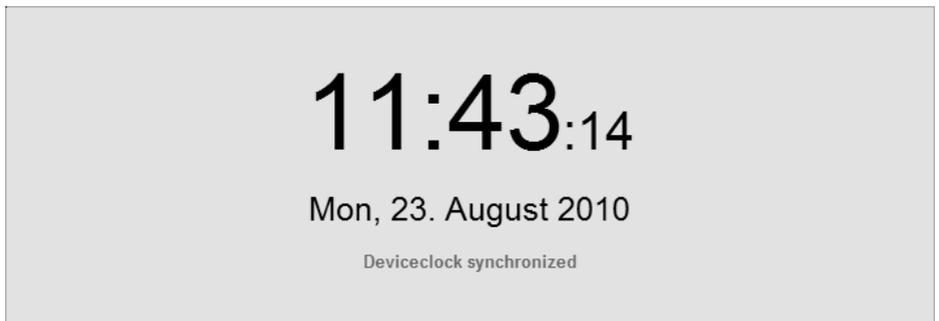

5.2 Define indivudal start page

The **Start page** option at

Home >> Config >> My Documents

specifies what the browser will display when invoking the IP address.

5.2.1 Deviceclock

The pure.box's deviceclock is shown in the right part of the browser window.

System clock on the start page

5.2.2 Website

All the sites viewable in the browser which are stored in the **websites** folder can be defined as an individual start page. An individual start page is shown in the browser if the pure.box is addressed only via the IP address.

To open a user start page when addressing the pure.box, first select the option **Website** under **Homepage**:

Homepage	● Device-Clock ○ Website in "userfiles/websites/"

Save your changes by clicking on **Save**.

Then specifiy the start page by navigating on **My Documents** in the **websites** folder using the file browser, and click on the **Edit file properties** for the desired file.

Check the **Homepage** option in the following properties dialog:

Save the change directly to the non-volatile setup of the pure.box by clicking on **Save**.

If a start page is configured on the pure.box which differs from a standard page, the corresponding file is marked in the file browser on the **User files** page with the following icon:

If the folder with the specified start page is not opened in the file browser, the Start page icon is displayed in front of the closed folder symbol. Using this navigation aid you can always quickly find the set start page.

If you have defined your own start page but the option **Start page** is set to **Device-Clock**, the start page icon is grayed out.

Since only one file can be defined as a start page, the option **Homepage** is automatically disabled for a previously selected file if you select a new start page.

5.3 Time- and event-triggered file running

PHP scripts, shell scripts and self-compiled binaries in the **userfiles** folder and its subfolders can be run:

- ... at system startup
- ... time-triggered
- ... event-triggered

This functionality allows you to create complete applications with within the pure.box as carrier.

Thanks to the broad functionality of PHP, C, C++ (e.g. file access, database access, network communication) simple solutions can be created very quickly.

Examples for configuring and creating executable scripts and programs can be found on **www.wut.de** in the application-section of the pure.box.

Configure automatic running on the **Edit file properties page**, which you reach by clicking on the Edit icon for the respective file in the file browser under **userfiles.** Save your changes to the non-volatile setup of the device by clicking on **Save**.

⚠ *Please note that the maximum run time of a PHP script is 2 minutes. If the system requires longer to run it, the script is stopped after two minutes.*

5.3.1 Running at system startup

If you want a file to run once whenever the pure.box is started up, check the option **At system start**. The process is ended after the file has fully run.

5.3.2 Time-triggered running

If you want to specify that a script- or a program-file run at certain times or certain intervals, check first the option Time triggered. The time is defined in the following fields:

- Seconds
- Minutes
- Hours
- Days of the month
- Months
- Days of the week

The values set here are directly entered in the CRON table. Valid characters are:

- *: Stands for all valid values in the respective field (e.g. all minutes or all hours).
- -: Indicates the range from ... to. Days of the week 2-4 for example stands for Tuesday to Thursday, whereas entering „*" triggers the script on every day of the week..
- /: Interval within the entered range, e.g. minute „0-45/2" triggers the script in the range between the 0th and 45th minute every two minutes (0, 2, 4, 6, ... 44).
- ,: Specifies the absolute value. For example minute „0,15,30" triggers the script every hour on the hour, every quarter hour and every half hour.

5.3.3 Event-triggered

A script or a binary is run when the pure.box receives data on the set TCP or UDP port. This is a way to implement simple server applications.

Check the option **Event triggered**. Select the desired **protocol**, TCP or UDP, and the **port**. Save your changes to the non-volatile setup of the pure.box by clicking on **Save**.

⚠ *Since port numbers smaller than 1024 are reserved for the system, you may only specify port numbers higher than 1023 for your application.*

If a script or program is invoked when data are received, it can read the data through the standard input. Writing to the standard output sends data over the network back to the source.

5.3.4 Transmitting parameters

Under the heading **Parameters** you can specify static parameters, which will be append as a GET-request when executing a PHP script. At shell-scripts or binaries they will be added in command line-style.

5.3.5 Marking in the file browser

If one or more automatic runs are set up, you can see these directly in the file browser on the **My Documents** page. The files are then marked in the **Run** column with one or more of the following icons:

- ◼ ⬆: File is run at system startup
- ◼ 🕐: File is run according to specified time profile
- ◼ ⚡: Data receipt triggers run

5.4 Opening uploded Web sites

Web sites stored on the pure.box in the **websites** folder can be opened and displayed directly from any browser. In addition to simple HTML pages PHP pages can also be opened. Interpretation of the PHP code takes place as is customary prior to sending to the browser.

The URL for addressing Web sites in the **websites** folder is constructed as follows:

```
<ip-address>/websites/<name of the site>
```

If the Web server on the pure.box is set to HTTPS, the prefix **https**:// is is also required. If the port for the protocol used (http or https) is different from the standard value, it must be indicated after the IP address separated by a colon.

6 Appendix

6.1 Device reset

6.2 Restoring factory default settings

6.3 Firmware update

6.4 Licenses

6.1 Device reset

In the following the methods for restarting the pure.box are described. At a restart all active connections are closed. The current settings, as long as they have been actually saved, are not lost.

6.1.1 Reset using WBM

Logging into the pure.box using WBM and Administrator rights offers you the option **Restart** in the navigation area under **Log-out**. Click on this button and the system will perform a restart after brief confirmation dialog. This closes all active connections.

The following bootup procedure is indicated by blue pulsing of the Status LED.

6.1.2 Restart using the button

Use the button on the front panel of the pure.box to perform a restart by holding the button down for approx. 5 seconds. While the button is being pressed the color of the Status LED changes from green to yellow to red.

After approx. 5 seconds the blue pulsing of the Status LED indicates that the boot process is running.

6.1.3 Reset port

Alternately to resetting the device by clicking on the button in the logoff dialog or pressing the front panel button, the pure.box can also be restarted by addressing TCP port 8888. If no Administrator password is assigned, simply opening the port will trigger a warm start. If an Administrator password is set, this must be send to the pure.box as soon as the connection is opened.

The reset begins immediately, all active connections are closed or rejected. The pure.box then begins to boot up, indicated by blue pulsing of the multi-color LED.

An explicit enabling of this option in the network settings is required in order to force the pure.box in this way into a warm start. This option is enabled in the factory default settings.

6.2 Restoring factory default settings

In some situations a reset of the pure.box to the factory default settings may be necessary. If the system is still capable of running and accessible through WBM, the factory default reset can be performed from the browser. If the pure.box is no longer accessible through software, the reset must be performed by closing jumpers inside the unit.

When resetting to the factory default condition the basic settings of the pure.box are restored. All user-configurations are deleted.

In addition, all files loaded by the user into the box are deleted.

6.2.1 Web Based Management

Log in to the pure.box using WBM and navigate to the logout dialog

Home >> Logout

Clicking on the **Factory defaults** button restores the device to its original factory default settings.

When this process is started the LED on the front panel begins to pulse blue. After the base configuration has been restored the system restarts. As soon as the LED turns green to indicate OK status, you can work with the pure.box again. The entire procedure may take up to a minute.

6.2.2 Inserting the jumper

To reset the system to its factory default settings when software access is not possible, you must first open the pure.box housing. To do this, first remove the housing panel which is latched into ther housing body on both long ends with two lugs each. Then you can remove the circuit board from the body.

⚠️ *You must first disconnect the device from any external power supply, since damage to the circuit board could otherwise occur.*

On the long side of the board where the backup battery is also located you will find four contact pins. Jumper both the pins closest to the middle of the boared using one of the jumpers provided and restore power. As soon as you turn the unit on the system begins to restore its factory default settings. During this process the LED will pulse blue. As soon as the factory defaults are reconstructed, the LED will illuminate with a constant, weak blue. Now remove the jumper and place the circuit board back in the housing.

6.3 Firmware update

The pure.box operating software is being continuously improved. The following section describes the procedure for uploading the firmware.

6.3.1 Where is the latest firmware available?

The latest firmware including the update tools and a revision history are published on our Web site at

`http://www.wut.de`

From there the best way to navigate is to use the search function located on the left side. First enter the model number of the pure.box (50510). From the associated selection box choose **Firmware** and then click on the **Go** button.

6.3.2 Firmware update under Windows

No special preparation of the pure.box is necessary for the firmware update.

The new firmware is transmitted to the pure.box using WuTility. In the inventory list select the desired pure.box and click on the **Firmware** button:

In the following dialog select only the firmware file you want to obtain (*.uhd) and then click on the **Next** button. After the file has been sent the pure.box automatically performs a restart and is then ready to use.

⚠️ *Interrupting the update process may under some conditions result in a failure of the pure.box. Therefore ensure the stability of the power supply and network connection.*

6.3.3 Update concept

To prevent a defect in the pure.box caused by a failed firmware update, the loaded firmware is not installed on the current image but rather on an alternate image. Each time the unit is booted up the more current image is booted, which allows the last update to be used.

If an error occurs during the update process and the firmware cannot be completely installed, the pure.box will still be operational due to the presence of the original and unmodified image.

6.3.4 Boot alternate image

If a firmware update cannot be successfully ended, for example due to an interrupted network connection, it can happen that the pure.box will then no longer boot. In this case you can boot from the original image, which was active when the firmware load failed, by jumpering the two outer contact pins on the pure.box board the next time the system is started. A new update of the firmware overwrites the inactive image containing the defective installation.

The jumper must be removed after you have successfully updated.

6.4 Licenses

6.4.1 GNU General Public License, v2

```
                 GNU GENERAL PUBLIC LICENSE
                   Version 2, June 1991

 Copyright (C) 1989, 1991 Free Software Foundation, Inc.,
 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA
 Everyone is permitted to copy and distribute verbatim copies
 of this license document, but changing it is not allowed.

                        Preamble

   The licenses for most software are designed to take away your
 freedom to share and change it.  By contrast, the GNU General Public
 License is intended to guarantee your freedom to share and change free
 software—to make sure the software is free for all its users.  This
 General Public License applies to most of the Free Software
 Foundation's software and to any other program whose authors commit to
 using it.  (Some other Free Software Foundation software is covered by
 the GNU Lesser General Public License instead.)  You can apply it to
 your programs, too.

   When we speak of free software, we are referring to freedom, not
 price.  Our General Public Licenses are designed to make sure that you
 have the freedom to distribute copies of free software (and charge for
 this service if you wish), that you receive source code or can get it
 if you want it, that you can change the software or use pieces of it
 in new free programs; and that you know you can do these things.

   To protect your rights, we need to make restrictions that forbid
 anyone to deny you these rights or to ask you to surrender the rights.
 These restrictions translate to certain responsibilities for you if you
 distribute copies of the software, or if you modify it.

   For example, if you distribute copies of such a program, whether
 gratis or for a fee, you must give the recipients all the rights that
 you have.  You must make sure that they, too, receive or can get the
 source code.  And you must show them these terms so they know their
```

rights.

  We protect your rights with two steps: (1) copyright the software, and
(2) offer you this license which gives you legal permission to copy,
distribute and/or modify the software.

  Also, for each author's protection and ours, we want to make certain
that everyone understands that there is no warranty for this free
software. If the software is modified by someone else and passed on, we
want its recipients to know that what they have is not the original, so
that any problems introduced by others will not reflect on the original
authors' reputations.

  Finally, any free program is threatened constantly by software
patents. We wish to avoid the danger that redistributors of a free
program will individually obtain patent licenses, in effect making the
program proprietary. To prevent this, we have made it clear that any
patent must be licensed for everyone's free use or not licensed at all.

  The precise terms and conditions for copying, distribution and
modification follow.

                      GNU GENERAL PUBLIC LICENSE
     TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

  0. This License applies to any program or other work which contains
a notice placed by the copyright holder saying it may be distributed
under the terms of this General Public License. The „Program", below,
refers to any such program or work, and a „work based on the Program"
means either the Program or any derivative work under copyright law:
that is to say, a work containing the Program or a portion of it,
either verbatim or with modifications and/or translated into another
language. (Hereinafter, translation is included without limitation in
the term „modification".) Each licensee is addressed as „you".

Activities other than copying, distribution and modification are not
covered by this License; they are outside its scope. The act of
running the Program is not restricted, and the output from the Program
is covered only if its contents constitute a work based on the
Program (independent of having been made by running the Program).
Whether that is true depends on what the Program does.

  1. You may copy and distribute verbatim copies of the Program's
source code as you receive it, in any medium, provided that you
conspicuously and appropriately publish on each copy an appropriate
copyright notice and disclaimer of warranty; keep intact all the
notices that refer to this License and to the absence of any warranty;
and give any other recipients of the Program a copy of this License
along with the Program.

You may charge a fee for the physical act of transferring a copy, and
you may at your option offer warranty protection in exchange for a fee.

  2. You may modify your copy or copies of the Program or any portion
of it, thus forming a work based on the Program, and copy and
distribute such modifications or work under the terms of Section 1
above, provided that you also meet all of these conditions:

    a) You must cause the modified files to carry prominent notices
    stating that you changed the files and the date of any change.

    b) You must cause any work that you distribute or publish, that in
    whole or in part contains or is derived from the Program or any
    part thereof, to be licensed as a whole at no charge to all third
    parties under the terms of this License.

    c) If the modified program normally reads commands interactively
    when run, you must cause it, when started running for such
    interactive use in the most ordinary way, to print or display an
    announcement including an appropriate copyright notice and a
    notice that there is no warranty (or else, saying that you provide
    a warranty) and that users may redistribute the program under
    these conditions, and telling the user how to view a copy of this
    License. (Exception: if the Program itself is interactive but
    does not normally print such an announcement, your work based on
    the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If
identifiable sections of that work are not derived from the Program,
and can be reasonably considered independent and separate works in
themselves, then this License, and its terms, do not apply to those
sections when you distribute them as separate works. But when you

distribute the same sections as part of a whole which is a work based
on the Program, the distribution of the whole must be on the terms of
this License, whose permissions for other licensees extend to the
entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest
your rights to work written entirely by you; rather, the intent is to
exercise the right to control the distribution of derivative or
collective works based on the Program.

In addition, mere aggregation of another work not based on the Program
with the Program (or with a work based on the Program) on a volume of
a storage or distribution medium does not bring the other work under
the scope of this License.

  3. You may copy and distribute the Program (or a work based on it,
under Section 2) in object code or executable form under the terms of
Sections 1 and 2 above provided that you also do one of the following:

    a) Accompany it with the complete corresponding machine-readable
    source code, which must be distributed under the terms of Sections
    1 and 2 above on a medium customarily used for software interchange; or,

    b) Accompany it with a written offer, valid for at least three
    years, to give any third party, for a charge no more than your
    cost of physically performing source distribution, a complete
    machine-readable copy of the corresponding source code, to be
    distributed under the terms of Sections 1 and 2 above on a medium
    customarily used for software interchange; or,

    c) Accompany it with the information you received as to the offer
    to distribute corresponding source code. (This alternative is
    allowed only for noncommercial distribution and only if you
    received the program in object code or executable form with such
    an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for
making modifications to it. For an executable work, complete source
code means all the source code for all modules it contains, plus any
associated interface definition files, plus the scripts used to
control compilation and installation of the executable. However, as a

special exception, the source code distributed need not include
anything that is normally distributed (in either source or binary
form) with the major components (compiler, kernel, and so on) of the
operating system on which the executable runs, unless that component
itself accompanies the executable.

If distribution of executable or object code is made by offering
access to copy from a designated place, then offering equivalent
access to copy the source code from the same place counts as
distribution of the source code, even though third parties are not
compelled to copy the source along with the object code.

  4. You may not copy, modify, sublicense, or distribute the Program
except as expressly provided under this License. Any attempt
otherwise to copy, modify, sublicense or distribute the Program is
void, and will automatically terminate your rights under this License.
However, parties who have received copies, or rights, from you under
this License will not have their licenses terminated so long as such
parties remain in full compliance.

  5. You are not required to accept this License, since you have not
signed it. However, nothing else grants you permission to modify or
distribute the Program or its derivative works. These actions are
prohibited by law if you do not accept this License. Therefore, by
modifying or distributing the Program (or any work based on the
Program), you indicate your acceptance of this License to do so, and
all its terms and conditions for copying, distributing or modifying
the Program or works based on it.

  6. Each time you redistribute the Program (or any work based on the
Program), the recipient automatically receives a license from the
original licensor to copy, distribute or modify the Program subject to
these terms and conditions. You may not impose any further
restrictions on the recipients' exercise of the rights granted herein.
You are not responsible for enforcing compliance by third parties to
this License.

  7. If, as a consequence of a court judgment or allegation of patent
infringement or for any other reason (not limited to patent issues),
conditions are imposed on you (whether by court order, agreement or
otherwise) that contradict the conditions of this License, they do not

excuse you from the conditions of this License. If you cannot
distribute so as to satisfy simultaneously your obligations under this
License and any other pertinent obligations, then as a consequence you
may not distribute the Program at all. For example, if a patent
license would not permit royalty-free redistribution of the Program by
all those who receive copies directly or indirectly through you, then
the only way you could satisfy both it and this License would be to
refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under
any particular circumstance, the balance of the section is intended to
apply and the section as a whole is intended to apply in other
circumstances.

It is not the purpose of this section to induce you to infringe any
patents or other property right claims or to contest validity of any
such claims; this section has the sole purpose of protecting the
integrity of the free software distribution system, which is
implemented by public license practices. Many people have made
generous contributions to the wide range of software distributed
through that system in reliance on consistent application of that
system; it is up to the author/donor to decide if he or she is willing
to distribute software through any other system and a licensee cannot
impose that choice.

This section is intended to make thoroughly clear what is believed to
be a consequence of the rest of this License.

  8. If the distribution and/or use of the Program is restricted in
certain countries either by patents or by copyrighted interfaces, the
original copyright holder who places the Program under this License
may add an explicit geographical distribution limitation excluding
those countries, so that distribution is permitted only in or among
countries not thus excluded. In such case, this License incorporates
the limitation as if written in the body of this License.

  9. The Free Software Foundation may publish revised and/or new versions
of the General Public License from time to time. Such new versions will
be similar in spirit to the present version, but may differ in detail to
address new problems or concerns.

Each version is given a distinguishing version number. If the Program
specifies a version number of this License which applies to it and „any
later version“, you have the option of following the terms and conditions
either of that version or of any later version published by the Free
Software Foundation. If the Program does not specify a version number of
this License, you may choose any version ever published by the Free Software
Foundation.

  10. If you wish to incorporate parts of the Program into other free
programs whose distribution conditions are different, write to the author
to ask for permission. For software which is copyrighted by the Free
Software Foundation, write to the Free Software Foundation; we sometimes
make exceptions for this. Our decision will be guided by the two goals
of preserving the free status of all derivatives of our free software and
of promoting the sharing and reuse of software generally.

                          NO WARRANTY

  11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY
FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN
OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES
PROVIDE THE PROGRAM „AS IS“ WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED
OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF
MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS
TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE
PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING,
REPAIR OR CORRECTION.

  12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING
WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR
REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES,
INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING
OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED
TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY
YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER
PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE
POSSIBILITY OF SUCH DAMAGES.

                     END OF TERMS AND CONDITIONS

            How to Apply These Terms to Your New Programs

   If you develop a new program, and you want it to be of the greatest
possible use to the public, the best way to achieve this is to make it
free software which everyone can redistribute and change under these terms.

   To do so, attach the following notices to the program. It is safest
to attach them to the start of each source file to most effectively
convey the exclusion of warranty; and each file should have at least
the „copyright" line and a pointer to where the full notice is found.

    <one line to give the program's name and a brief idea of what it does.>
    Copyright (C) <year> <name of author>

    This program is free software; you can redistribute it and/or modify
    it under the terms of the GNU General Public License as published by
    the Free Software Foundation; either version 2 of the License, or
    (at your option) any later version.

    This program is distributed in the hope that it will be useful,
    but WITHOUT ANY WARRANTY; without even the implied warranty of
    MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the
    GNU General Public License for more details.

    You should have received a copy of the GNU General Public License along
    with this program; if not, write to the Free Software Foundation, Inc.,
    51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA.

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this
when it starts in an interactive mode:

    Gnomovision version 69, Copyright (C) year name of author
    Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type 'show w'.
    This is free software, and you are welcome to redistribute it
    under certain conditions; type 'show c' for details.

The hypothetical commands 'show w' and 'show c' should show the appropriate
parts of the General Public License. Of course, the commands you use may
be called something other than 'show w' and 'show c'; they could even be
mouse-clicks or menu items—whatever suits your program.

You should also get your employer (if you work as a programmer) or your
school, if any, to sign a „copyright disclaimer" for the program, if
necessary. Here is a sample; alter the names:

  Yoyodyne, Inc., hereby disclaims all copyright interest in the program
  'Gnomovision' (which makes passes at compilers) written by James Hacker.

  <signature of Ty Coon>, 1 April 1989
  Ty Coon, President of Vice

This General Public License does not permit incorporating your program into
proprietary programs. If your program is a subroutine library, you may
consider it more useful to permit linking proprietary applications with the
library. If this is what you want to do, use the GNU Lesser General
Public License instead of this License.

6.4.2 OpenSSL-Lizenz

  LICENSE ISSUES
  ==============

  The OpenSSL toolkit stays under a dual license, i.e. both the conditions of
  the OpenSSL License and the original SSLeay license apply to the toolkit.
  See below for the actual license texts. Actually both licenses are BSD-style
  Open Source licenses. In case of any license issues related to OpenSSL
  please contact openssl-core@openssl.org.

  OpenSSL License

*/
```

6.4.3 OpenNTPD-Lizenz

```
This is a summary of the licences for the files that make up Portable
OpenNTPD.

Apart from the exceptions listed below, all of the files are under an
ISC-style licence with the following copyright holders, first for the
files from OpenBSD's ntpd:

Henning Brauer
Alexander Guy

and the portability layer:

Darren Tucker
Damien Miller
Internet Software Consortium
```

Todd C. Miller
Anthony O.Zabelin

```
/*
 * Permission to use, copy, modify, and distribute this software for any
 * purpose with or without fee is hereby granted, provided that the above
 * copyright notice and this permission notice appear in all copies.
 *
 * THE SOFTWARE IS PROVIDED „AS IS" AND THE AUTHOR DISCLAIMS ALL WARRANTIES
 * WITH REGARD TO THIS SOFTWARE INCLUDING ALL IMPLIED WARRANTIES OF
 * MERCHANTABILITY AND FITNESS. IN NO EVENT SHALL THE AUTHOR BE LIABLE FOR
 * ANY SPECIAL, DIRECT, INDIRECT, OR CONSEQUENTIAL DAMAGES OR ANY DAMAGES
 * WHATSOEVER RESULTING FROM LOSS OF MIND, USE, DATA OR PROFITS, WHETHER
 * IN AN ACTION OF CONTRACT, NEGLIGENCE OR OTHER TORTIOUS ACTION, ARISING
 * OUT OF OR IN CONNECTION WITH THE USE OR PERFORMANCE OF THIS SOFTWARE.
 */
```

Specific parts of the portability layer have the following licences.

bsd-snprintf.c is from OpenSSH and has the following licence:
```
/*
 * Copyright Patrick Powell 1995
 * This code is based on code written by Patrick Powell
 * (papowell@astart.com) It may be used for any purpose as long as this
 * notice remains intact on all source code distributions
 */
```

The following files are from OpenSSH or OpenBSD and are under a 2-term
BSD license with the noted copyright holders:

atomicio.c: Theo de Raadt, Anil Madhavapeddy
atomicio.h, bsd-poll.h: Theo de Raadt

```
/*
 * Redistribution and use in source and binary forms, with or without
 * modification, are permitted provided that the following conditions
 * are met:
 * 1. Redistributions of source code must retain the above copyright
 *    notice, this list of conditions and the following disclaimer.
 * 2. Redistributions in binary form must reproduce the above copyright
 *    notice, this list of conditions and the following disclaimer in the
```

```
 * LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY
 * OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF
 * SUCH DAMAGE.
 */
```

This software consists of voluntary contributions made by many
individuals on behalf of the PHP Group.

The PHP Group can be contacted via Email at group@php.net.

For more information on the PHP Group and the PHP project,
please see <http://www.php.net>.

PHP includes the Zend Engine, freely available at
<http://www.zend.com>.

6.4.11 zlib-Lizenz

ZLIB DATA COMPRESSION LIBRARY

zlib 1.2.3 is a general purpose data compression library. All the code is
thread safe. The data format used by the zlib library is described by RFCs
(Request for Comments) 1950 to 1952 in the files
http://www.ietf.org/rfc/rfc1950.txt (zlib format), rfc1951.txt (deflate format)
and rfc1952.txt (gzip format). These documents are also available in other
formats from ftp://ftp.uu.net/graphics/png/documents/zlib/zdoc-index.html

All functions of the compression library are documented in the file zlib.h
(volunteer to write man pages welcome, contact zlib@gzip.org). A usage example
of the library is given in the file example.c which also tests that the library

is working correctly. Another example is given in the file minigzip.c. The
compression library itself is composed of all source files except example.c and
minigzip.c.

To compile all files and run the test program, follow the instructions given at
the top of Makefile. In short "make test; make install" should work for most
machines. For Unix: "./configure; make test; make install". For MSDOS, use one
of the special makefiles such as Makefile.msc. For VMS, use make_vms.com.

Questions about zlib should be sent to <zlib@gzip.org>, or to Gilles Vollant
<info@winimage.com> for the Windows DLL version. The zlib home page is
http://www.zlib.org or http://www.gzip.org/zlib/ Before reporting a problem,
please check this site to verify that you have the latest version of zlib;
otherwise get the latest version and check whether the problem still exists or
not.

PLEASE read the zlib FAQ http://www.gzip.org/zlib/zlib_faq.html before asking
for help.

Mark Nelson <markn@ieee.org> wrote an article about zlib for the Jan. 1997
issue of Dr. Dobb's Journal; a copy of the article is available in
http://dogma.net/markn/articles/zlibtool/zlibtool.htm

The changes made in version 1.2.3 are documented in the file ChangeLog.

Unsupported third party contributions are provided in directory "contrib".

A Java implementation of zlib is available in the Java Development Kit
http://java.sun.com/j2se/1.4.2/docs/api/java/util/zip/package-summary.html
See the zlib home page http://www.zlib.org for details.

A Perl interface to zlib written by Paul Marquess <pmqs@cpan.org> is in the
CPAN (Comprehensive Perl Archive Network) sites
http://www.cpan.org/modules/by-module/Compress/

A Python interface to zlib written by A.M. Kuchling <amk@amk.ca> is
available in Python 1.5 and later versions, see
http://www.python.org/doc/lib/module-zlib.html

A zlib binding for TCL written by Andreas Kupries <a.kupries@westend.com> is
availlable at http://www.oche.de/~akupries/soft/trf/trf_zip.html

An experimental package to read and write files in .zip format, written on top
of zlib by Gilles Vollant <info@winimage.com>, is available in the
contrib/minizip directory of zlib.

Notes for some targets:

- For Windows DLL versions, please see win32/DLL_FAQ.txt

- For 64-bit Irix, deflate.c must be compiled without any optimization. With
  -O, one libpng test fails. The test works in 32 bit mode (with the -n32
  compiler flag). The compiler bug has been reported to SGI.

- zlib doesn't work with gcc 2.6.3 on a DEC 3000/300LX under OSF/1 2.1 it works
  when compiled with cc.

- On Digital Unix 4.0D (formely OSF/1) on AlphaServer, the cc option -std1 is
  necessary to get gzprintf working correctly. This is done by configure.

- zlib doesn't work on HP-UX 9.05 with some versions of /bin/cc. It works with
  other compilers. Use "make test" to check your compiler.

- gzdopen is not supported on RISCOS, BEOS and by some Mac compilers.

- For PalmOs, see http://palmzlib.sourceforge.net/

- When building a shared, i.e. dynamic library on Mac OS X, the library must be
  installed before testing (do "make install" before "make test"), since the
  library location is specified in the library.

Acknowledgments:

  The deflate format used by zlib was defined by Phil Katz. The deflate
  and zlib specifications were written by L. Peter Deutsch. Thanks to all the
  people who reported problems and suggested various improvements in zlib;
  they are too numerous to cite here.
