Store tag events on a database server

Tagstore is the free tool for collecting tag events from W&T RFID Servers and passing them to a database server. Tagstore uses ODBC clients for the various server systems. This means the system can be coupled to any database which comes with an ODBC driver for Microsoft Windows.

Properties

Function Overview

- Automatic generation of an inventory list of the RFID Servers available on the local network
- Display database statistics
- Export of data series from a device into an Excel spreadsheet
- Uses ODBC clients for the respective database, making it system-neutral

System requirements

- Operating system Windows 95/98/Me or NT 4.0/2000/XP/Vista
- Network card (Ethernet)
- Installed TCP/IP stack
- ODBC driver for your database
