

Application:

## Visualizations for Web-Io products

Using the Site-Creator integrated into the W&T Motherbox you can very simply create visualizations and control pages for W&T Web-Io products. Absolutely no programming knowledge is required.

For example to visualize a temperature and a switching signal, you just need a [Motherbox](#) and the associated Web-Io devices.

After successfully logging into the web interface of the Motherbox and opening the built-in Site-Creator, various display and operating elements will be available to you. These elements are easily positioned using the mouse to display temperatures, analog measurements and switching signals and make them operable.

Here's how it works:

### Here a YouTube video needs to be displayed!

You activate the video function using the following button, whereby you use the provider Google and (at your own risk in terms of data protection) share data with it.

Enter YouTube

To avoid such extra clicks in the future, try  
eu-de-bonn@ec.europa.eu (Regional representative of the European Commission in Bonn)  
or support-de@google.com.

The values and states of even multiple Web-Ios can be easily combined in the browser using the Site-Creator by means of conventional drag-and-drop.
