rule.box - The IoT automation center

The rule.box is a connector for the Web-IOs from Wiesemann & Theis and numerous other IoT products. Using the graphical development tool Node-RED you can create virtual connections between the in- and outputs of your IoT devices as well as many different cloud services. Automation sequences can now be implemented without the need for deep programming knowledge.

optional services

Remote analysis, programming, workshop and coaching

Motherbox - Central box for Web-IOs

The Motherbox enables access to the in- and outputs of connected Web-IOs and Web Thermometers through a single, central device. It detects measurement values and switching states of connected devices in its internal database. The Site Creator allows you to create operating and visualization interfaces in just a few minutes. Layouts, sequence diagrams and process representations can be incorporated as a graphic and embellished with indicators and operating elements.
