

Product overview:

TCP/IP-Ethernet <> USB

Provide USB devices in the network

The industrial-grade W&T USB Servers provide you with access to any USB devices via the network. Thanks to the high interoperability of more than 99% you can be sure that your device will be supported as well.

- **Provide shared resources at a central location**
Operate USB devices such as scanners, cameras, printers, dongles etc. regardless of the cable length from your chosen operation sites.
- **USB port for virtual and physical machines**
Thanks to the W&T USB Redirector the device behaves as if it were directly connected to your computer with an actual Windows operating system (client and server) - even from virtual environments.
- **USB Server as dongle server**
No need to carry dongles back and forth between different computers. Transfer the license with a simple mouse click.
