

Application overview

ERP-Gateway

Switching digital outputs using Wayback

Step 1: Startup

W&T devices quickly integrated into the network using WuTility.

Step 2: Integration into your system

SAP: Automated switching in ABAP program sequence

ABAP source code example for switching the digital outputs via Wayback as a response to values for any variables.

SAP: Switching via mouse click with ABAP

The user switches directly via mouse click. ABAP source code for applying using copy/paste.

Switching per batch job using Windows utilities

A single command line switches the light - even fully automatically using the Windows task planner

Additional access options to the in-/outputs

In addition to the Wayback procedure, all access options of the Web-IO Digital are also available.
