

Application for Web-IO Analog-In:

# Sending analog values over the network using measurement transducers

Product overview 

Application overview 

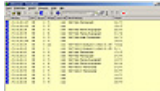

## Definition of tasks

All the measurement values for a production system need to be saved to the company's internal SQL server for archiving and further processing.

## The solution

Measuring transducers are used to connect the individual measurement points to Web-IO Analog-In devices. After assigning the network parameters, these are first made available in the network. The W&T Tool Sensobase® is installed on a client, and the tool collects the measurement values and forwards them to the local SQL server.

## Details

<p>1. The measurement points for the production system are connected to the Web-IO Analog-In using measuring transducers.</p>	
<p>2. The Web-IO Analog-In was connected to an available Ethernet port and provided with power.</p>	
<p>3. The W&amp;T tool Sensobase® is installed on a client PC and the parameters for the plant's internal SQL server configured.</p>	
<p>4. The measurement values are now sent cyclically every minute to the SQL server.</p>	

## The tool

The W&T tool Sensobase® is available for free downloading [here](#), or from the W&T product CD.
