### Monitor air quality

On-demand ventilation control in office buildings, schools, education and centers and sports facilities often involve measurement of CO<sub>2</sub>. But a drawback of CO<sub>2</sub> measurement is that odors caused by VOC are not detected, since they have only a slight effect on the CO<sub>2</sub> measurements.

Even though there is an actual ventilation need, this condition is not detected using traditional technology. With this VOC measuring instrument the room air quality can be determined based on human perception.

[More information on VOC can be found here](#)
