

Application for the Web-IO Digital:

Web-IO Digital - Connecting switching signals point-to-point

Adding actions for turning on an output

- To change the configuration of the Web-IO you first need to obtain the necessary access rights by entering the administrator password.

- Then in the menu tree select *Actions*.
- Click on the *Add* button to create a new action.
- For the action to be executed when the respective trigger event occurs, it must first be enabled. Under *Action Name* you can assign a meaningful name.

- In the *Triggers* field select *Input*. Specify which input should trigger the action and select *Upon change switch to ON*.
- Under *Action* select *Switch output* and then *Switch output on another Web-IO*. Enter the IP address and the password for the target Web-IO in the corresponding fields.
- Under *Switch from* specify the output to switch and under *to states* select *ON*.

Add action for turning off an output

- In the menu tree click on *Actions* and add another action.

- Here again the action must first be enabled and under *Action Name* a meaningful name assigned.
- In the *Triggers* field select *Input*. Specify which input should trigger the action. Under *Upon change switch to* select *OFF*.
- In the *Action* field select *Switch output* and then *Switch output on another Web-IO*. Enter the IP address and the password for the target Web-IO in the corresponding fields.
- Under *Switch from* specify the output to switch and under *to state* select *OFF*.
