

Application possibilities:

rule.box

Small, reliable, versatile.

Connect IoT worlds:

- **IOs:**
Web-RIOs, other decentralized IOs and control- and regulating systems
- **Data services:**
IoT cloud services, communication services and databases
- **User interfaces:**
PCs, smart phones and tablets

Automate

Connect your IOs to the rule.box to have access to all your data from one common location. If you want to establish rules as a function of input values, the rule.box serves as a switching and control center.

[To example applications](#)

Connect

Your IoT devices can be connected to various databases or cloud services using the rule.box. The collected data can be processed in Node-RED and then transmitted in filtered form.

[To example applications](#)

Switching

The rule.box puts control in your own hands. You get the overview of the states of your application and can intervene through the dashboard whenever needed.

[To example applications](#)

Visualize

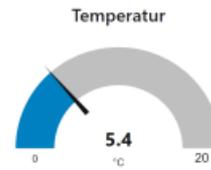

Get the overview and configure your dashboard in any way desired. This way all the relevant data are prepared and made easily recognizable.

Notify

Would you like to not have to keep a constant watch over your applications but still not miss anything? Just specify events such as limit violations or other status changes. When they occur, you're reliably notified.

Example for a dashboard

Außenbeleuchtung

Status: Licht
